

BIPP - Push Flap Welding Spring Hinge

The Justor BIPP push flap hinge is constructed with 2 steel profiles used in conjunction with existing hinges. The upper profile pushes the door closed by pivoting on the washer, which sits on the lower profile that is welded to the frame.

The spring in the BIPP pushes, but does not carry the weight of the door.

The BIPP is suitable for use on warehouse doors, spray booths, livestock access fencing, and access gates, to name a few.

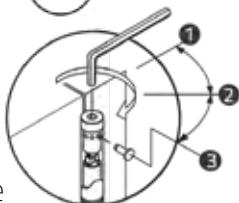

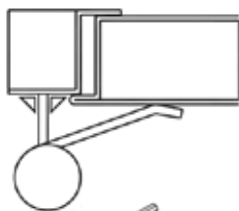

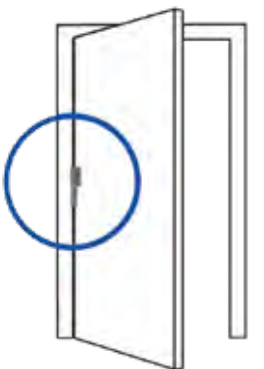

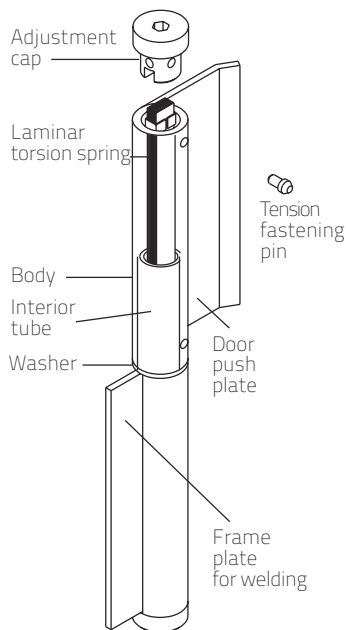

BIPP Push Flap Welding Spring Hinge For Welding onto Steel Jambs and Frames

The Justor BIPP push flap welding hinge is specifically designed for welding to gates and metal door jambs where existing hinges may already be in use. By adding the BIPP hinge, you will be able to automatically close steel framed doors and metal gates that weigh up to **80kg**. The BIPP hinges are sleek, stylish and simple. Made in Spain to exacting European standards, the BIPP is adjustable without the need to take down the door or gate.

Made of steel, the BIPP can be used on internal or external steel or metal-framed door and jambs, whenever a door needs to close without assistance. The BIPP push flap represents quality and innovation not normally seen in a product of this type. It can also be powder coated, allowing it to blend into any environment and surrounding.

Cost effective and highly functional, it is an practical alternative to traditional and unsightly door closers and closing solutions. The BIPP range is a maintenance free solution - no regular greasing or adjustments required, just 1 drop of oil in the top cap once a year. The BIPP spring hinge comes with a 2 year manufacturer's guarantee.
