H2161 - 452.2 - P

A beautifully curved handle for sliding doors. The door opens and closes smoothly without intruding on the doorway.

The gentle, protruding three-dimensional bend in the form ensures that when opening and closing the door the user's hand never comes into contact with the frame. Moreover, the amount of the door protruding into the doorway when opened has been lessened. Combining functionality with a simple, beautiful design that fits the door neatly and provides smooth movement when opening and closing.
